PROFESSIONAL SUMMARY

Software Engineer with more than 3 years of experience in full-stack development, test automation, and enterprise system integration. Experienced in building scalable applications, improving business workflows, and collaborating with cross-functional teams to deliver reliable software solutions. Currently working at European Energy Exchange AG while pursuing an M.Sc. in Web Engineering at TU Chemnitz.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL, C++, PHP, Bash

Frameworks & Libraries: Spring Boot, Hibernate, React.js, Angular, Node.js, Next.js, Streamlit, Swagger

Enterprise & Messaging: RabbitMQ, API Gateway (Spring Cloud), Eureka (Service Discovery)

Test Automation: Playwright (Python), Selenium, Allure Reporting, Unit Testing, Integration Testing

Cloud & DevOps: Docker, Jenkins, GitHub Actions, Git, GitOps, CI/CD

Tools & Platforms: JIRA, ServiceNow, Confluence, Postman, Power BI

Data & Analytics: Pandas, NumPy, Scikit-learn, SQL Databases

Methodologies: Agile, Scrum, DevOps, REST API, Microservices, OOP, Code Review

PROFESSIONAL EXPERIENCE

Software Developer (Werkstudent), European Energy Exchange

09/2025 – Present | Germany

- **Designed and built a Python/Playwright framework** to automate manual energy settlement verification, making regression testing fast and reliable for the first time.
- **Containerized the environment using Docker and integrated it with JIRA**, allowing non-technical business users to trigger test runs without engineering help.
- **Automated DevOps workflows via GitHub Actions** to publish base images and send Teams notifications, streamlining the release process for the entire team.
- **Acted as a bridge between business and development teams**, translating complex settlement requirements into well-structured, maintainable automation test cases.
- **Supported daily manual testing and sign-offs** for high-value energy transactions, ensuring 100% accuracy across all verified settlements.

Software Developer(Werkstudent), AI2Connect GmbH

06/2025 – 08/2025 | Germany

- **Contributed to AI2AccessPilot**, an AI-powered platform that converts standard websites into fully accessible, WCAG-compliant formats.
- **Built and shipped React.js features** by translating design specs into accessible, WCAG-compliant UI components.
- **Managed sprint tasks and delivery workflows using JIRA** in a fast paced startup environment to ensure timely and high-quality feature releases.

Software Analyst, Capgemini

09/2022 – 05/2024 | India

- **Optimized scalable enterprise web applications** to serve thousands of users, achieving a 30% reduction in API response times through backend enhancements.
- **Built modular Angular UI components** that ensured high performance and a seamless experience across all desktop and mobile browsers.

- **Shipped a custom JIRA–ServiceNow integration** that automated ticket syncing and cut manual tracking by 50%.
- **Refined complex SQL queries** to reduce data latency by 40%, significantly improving the overall responsiveness of the application.
- **Upheld high codebase standards** for a team of 8+ developers through rigorous PR reviews, Git version control, and CI/CD pipeline management.
- **Authored technical documentation** that streamlined developer onboarding and notably reduced repetitive technical questions during standups.
- **Earned "Rising Star" and "Best Employee Innovation" awards** for outstanding contributions and creative problem-solving on the project.

Trainee Software Developer, Capgemini

01/2022 – 04/2022 | India

- **Designed and implemented RESTful APIs** using Spring Boot and Hibernate, ensuring clean database interactions for enterprise microservices integration.
- **Built RESTful microservices**, gaining hands-on experience with Swagger, Spring Cloud Gateway, Eureka, and RabbitMQ for service discovery and messaging.
- **Contributed to Agile sprints and CI/CD improvements**, streamlining the pipeline to increase deployment frequency and team efficiency.

Software Development Intern, Neuronode Technologies

07/2021 – 09/2021 | India

- **Built a real-time stock analysis application** using Python and Streamlit, providing dynamic profit/loss visualizations via the Quandl API.
- **Designed interactive features** that allowed users to visualize financial trends across custom time ranges.

EDUCATION

Master of Science – Web Engineering,
Technische Universität Chemnitz

10/2024 – present | Germany

Bachelor of Engineering – Computer,
Savitribai Phule Pune University

07/2018 – 04/2022 | India

PROJECTS

NutriXR — AR Nutrition & AI Health Coach

Built an AR-based nutrition application with an AI chatbot providing personalized health reports and diet plans. Stack: React, Three.js, WebXR, Groq API.

Price Variation Detection via Social Media & News

Developed a BERT-based deep learning model to predict price fluctuations of consumer commodities by analyzing social media and news sentiment.

CERTIFICATIONS

- Cloud Practitioner — Amazon Web Services
- Generative AI — Amazon Web Services
- Google Generative AI — Google Cloud
- Agile Software Development — Coursera
- DevOps Foundations: CI/CD — LinkedIn
- Java Developer Level 1 & 2 — Capgemini

AWARDS

- Rising Star Award — Capgemini
- Best Employee Innovation Award — Capgemini
